

Desktop-to-Cloud Business Communications Solutions

OUTSOURCE DEVELOPMENT, MANAGEMENT, AND MAINTENANCE OF YOUR DESKTOP-TO-CLOUD NETWORK

Outsource Development, Management, and Maintenance of Your Desktop-To-Cloud Network

As your virtual IT department, IntelliSyn partners with you to create a custom desktop-to-cloud business network tailored to the unique needs of your organization.

Creating, deploying, and managing an efficient and secure information technology (IT) infrastructure requires an in-depth knowledge of hardware, software, security, and cloud solutions, as well as dedicated resources who can monitor and maintain the end-to-end health of the infrastructure. This can be challenging and expensive.

IntelliSyn eliminates the challenge and reduces the expense by enabling you to offload the development, management, and maintenance of your IT infrastructure. With IntelliSyn, you get a fully staffed IT department and all the IT services you need at a fraction of the cost.

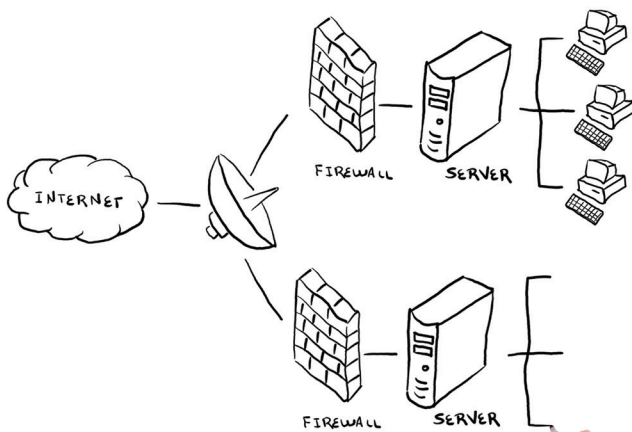

Get the Network You Need

As your virtual IT department, IntelliSyn partners with you to create a custom desktop-to-cloud business network tailored to the unique needs of your organization. We assess the effectiveness of available hardware, software, security systems, and cloud solutions before we recommend them. And we validate the impact they will have on your business before they're deployed.

By offloading your IT infrastructure to IntelliSyn, you can easily harness the full power of the most advanced IT systems and solutions and improve time-to-service with a custom infrastructure that works the way you work.

Operate at Peak Efficiency

IntelliSyn's complete portfolio of desktop-to-cloud IT solutions are built with the industry's most advanced and best-of-breed hardware and software. And our managed services are structured to let you focus on the

needs of your customers rather than on managing your IT infrastructure.

Our managed services are designed to help you get the most from your investment in information technology. They reduce the downtime that can negatively impact business productivity. And they maintain the flow of critical business information and enhance business processes, productivity, and performance.

Customize IT Infrastructure Management With IntelliSupport

Our IntelliSupport service provides desktop-to-cloud infrastructure management from network consulting to complete help desk technical support for desktop systems, physical networks, virtual networks, and all the elements in between, such as servers, routers, switches, and wireless access points.

With IntelliSupport, you get end-to-end service and support for every element in your network 24 hours a day, seven days a week, and 365 days a year. And if something goes wrong, there's only one number to call for immediate access to our team of experts.

Optimize Network Security With IntelliSecure

Our IntelliSecure service provides tailored, scalable, turnkey managed security, unified threat management (UTM), and closed-circuit video surveillance 24 hours a day, seven days a week. It protects your network and data from the prying eyes and malicious intent of cybercriminals, the competition, and even disgruntled ex-employees with firewalls, content

filtering, anti-virus, anti-spam, anti-spyware, data management, and intrusion prevention systems.

Simplify Data and Application Management With IntelliServer

Of course, all that information and the applications that use it must be stored somewhere. And they must be easily accessible by employees, partners, suppliers, and customers whenever they need them, from wherever they are. IntelliServer provides public, private, or hybrid cloud-based hosting and co-location of IT infrastructure and application servers backed by complete network administration, maintenance, and reporting that simplifies network, data, and application management.

Our managed services are designed to help you get the most from your investment in information technology by reducing downtime that can negatively impact business productivity.

Get Up and Running — Fast — With IntelliOffice

Selecting, configuring, deploying, and managing the right combination of hardware and software for any IT infrastructure can be daunting. IntelliOffice eliminates the risk and gets you up and running with an end-to-end, turnkey, hassle-free network in a box built on the latest hardware and software from the world's leading manufacturers and developers. With IntelliOffice, you get desktop-to-cloud managed office services, including installation, ongoing management, maintenance, and support for all hardware, software, and cloud networking elements on a fixed-rate, predictable monthly rate plan. And, when it's time to upgrade, IntelliSyn manages the process at minimal cost so you can avoid hardware and software obsolescence.

Move Up to Unified Communications With IntelliTalk

At some point, you'll want to integrate all your communications systems to improve productivity and reduce costs. IntelliTalk is a full-featured internet telephony and unified communications solution for small- and medium-sized businesses (SMBs) and medium to large enterprises. It leverages the most advanced Voice over IP (VoIP) technologies to replace costly phone lines, switches, and cabling and reduce monthly phone costs. With IntelliTalk, you get enhanced communication and

superior collaboration tools that improve customer service, boost productivity, and are accessible on all your devices through one user-friendly interface — wherever you are.

Enhance Productivity and Collaboration With IntelliShare

Success in business is all about access to information. With unrestricted access to business files, your employees can be more responsive to customers and more productive. IntelliShare provides a customizable, managed enterprise file sync and share (EFSS) solution that enables secure access to business data from anywhere, supports desktop and server backup, and ensures business continuity with disaster recovery processes. This flexible EFSS solution is a completely managed service hosted in IntelliSyn's secure cloud environment.
